

Your pump is now built!

Note: In order for the pump to raise the water, the outlet hose must be elevated to no more than 20 feet.

In order to use it, you must

1. Connect a water hose to the inlet side of the pump.
2. Connect an outlet hose to the outlet of the pump.
3. Connect the 2-liter bottle to the top of the pump.

Once these pieces are connected you can test the pump by running water in through the inlet and pressing the button on the check valve so that the 2-liter bottle begins to fill with water. Once the bottle reaches its pressure equilibrium the outlet hose will have a water flow.
