# Taking the "bite" out of science

## Multi-state teachers event stops in Logansport to help teachers connect their students with real-world scientists.

by Sarah Einselen  
Pharos-Tribune

LOGANSPORT — In a small hotel meeting room Tuesday night, 15 teachers from nine local and regional schools chuckled and chatted among themselves while they held strips of cut-up coffee filters with one end barely dipped into water.

A spot of color, inked with a cheap child's felt-tip marker, stood out near the end of each strip. The teachers watched an experiment they've done many times before — water seeping up the coffee filter strip, against gravity, and separating the pigments in the ink as it went.

The experiment was an illustration of chromatography, one of many chemical processes used either to manufacture ethanol or facilitate its manufacture at the Clymers ethanol plant owned by The Andersons just south of Logansport. The plant's quality assurance and laboratory manager, Casey N. McMurtrie, was invited by program sponsor The Center for Excellence in Education, or CEE, to help teachers become more aware of how scientific principles they teach in the classroom work out in real-world careers.

CEE sponsored a Bite of Science dinner and presentation time Tuesday evening at the Holiday Inn Express-Logansport on East Market Street. It's one of about 10 dinners the organization is doing this fall and winter in Indiana, Illinois and Virginia to acquaint teachers with local scientists.

"They are to connect the research that scientists and engineers in the community are doing with what's being taught in the classrooms," said Natasha Schuh-Nuher, director for CEE's teacher enrichment program. "When the teachers are asked, 'why do I need to know this?' the teachers can provide exciting stories — real life examples of what's being taught in the classroom."

McMurtrie showed several diagrams of the steps involved in turning raw corn into ethanol — not an easy task, she said, since yeast by itself doesn't like to eat corn.

The laboratory heats ground corn with water in a process called hydrolysis to prod the yeast into eating the corn. Lab techs add another chemical to keep the ground corn and water from turning into gravy, too. But if too much of that chemical is added, the lab runs the risk of turning the substance brown and reducing the amount of ethanol that can be produced from it.

That turning brown is the same process that turns caramel brown, she said. The same thing happens when she caramelizes sweetened condensed milk by submerging a can of it in boiling water for about three hours.

Other presenters from Manchester University and the Kokomo Chrysler plant, associate biology professor Jerry Sweeten and industrial engineering manager Heather Nacke, also spoke to the group of teachers from Logansport, Pioneer and Caston and as far away as North White High School in Monon in northern White County.

Katie Dahman, chemistry and earth science teacher at Logansport High School, said she attended the dinner to network with the scientists and with other teachers and to explore "science in general."

One of the first questions she fields from students, she said, is "Why is this important?"

"A lot of times, I tell them that while they may not need to know this problem, they're learning to problem-solve," said Dahman. "We learn topics because you've got to learn how to teach yourself."

Science didn't come easy to her, she said. In high school, she struggled through science but enjoyed it anyway.

"And for some reason I chose to go to college and study something that was hard for me," said Dahman. Now in her third year teaching, she suggested that her own experience with science would inspire students to pursue sciences even if it didn't come easy for them, either.

Dahman's freshman students also study careers in science during one portion of her class in order to introduce them to the variety of fields and jobs that studying science can lead to.

"A lot of times they know what their parents do," said Dahman, "but they don't know what's out there."

"Bite of Science" came to Logansport in part because CEE's president, Joann DiGennaro, and her brother, Thomas A. Pasquale, president of Bite of Science's co-sponsor Pasquale Trucking Co., Inc., both hail from Logansport. DiGennaro graduated from Logansport High School in 1960.

Organizers hoped that the connections made at the science dinner would ultimately increase public awareness about fields in science, technology, engineering and mathematics. Teachers who signed up have access after the fact to videos of the presentations at all the different "Bite of Science" dinners and to other science education resources.

"People tend to feel — 'what can I do in science? I'm not smart enough,'" said Kathy Frame, director for the USA Biology Olympiad and CEE special projects, like the Bite of Science series. "Science is such a diverse field. You can bring your artistic skills into it, you can bring your communication skills... It's not just about the lab."
